SKETCH MAP
OF THE
CITY OF BUFFALO

DESCRIPTIVE

BUFFALO a city of vast commercial importance situated at the extreme eastern end of Lake Erie: has a population of about 240,000

Its Harbor is formed by Buffalo River, navigable for over two miles, the entrance being protected by a breakwater 2000 ft long. The forty grain elevators - capable of receiving & transferring 3,000,000 bushels of grain daily, become necessary, as the tonnage of vessels - arrivals and clearances - reached the enormous amount of 4,145,886 tons for the year 1886

Some twenty railroads - and 470 miles of tracks inside the city limits (more than any other city in the world) makes it an important rail-road centre.

Its 'East Buffalo' stock yards are second largest in the country.

The Park - Parade & Front, with connecting boulevards, in all about 500 acres, form an interesting feature, & afford many beautiful & pleasing drives. It has 140 miles of paved streets, 30% which are asphalt - balance of stone.

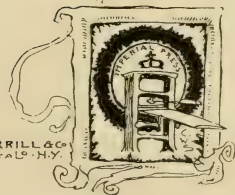

Then the City Building - a granite structure costing \$1,300,000. - Music Hall - Library - Soldiers Monument - Churches - Hotels - fine Private Residences - Crematory - Electric Lights - Natural Gas - western terminous Erie Canal - belt line railroad - 50 miles street-car tracks - Numerous benevolent institutions - Hospitals &c, besides the innumerable business houses, all add to its importance. (All mentioned in this Book are of the leading ones in their respective lines.)

Will persons corresponding please mention Inking
